

BRINGING TOGETHER THE “WHO’S WHO” IN QUANTUM COMPUTING SOFTWARE

Quantum computing is becoming a reality and, with recent accomplishments, software for this promising technology is becoming key for successful utilization. Numerous players introduce new software solutions frequently. For the fourth time, the Munich Quantum Software Forum (#MQSF) brings together researchers, industry leaders, innovators, and practitioners to advance the rapidly evolving field of quantum software; including:

- Sebastian Stern — AWS
- Yehuda Naveh — Classiq
- Utz-Uwe Haus — HPE
- Martin Kiffner — planqc
- Josh Izaac — Xanadu
- Janne Mäntylä — IQM
- Seyon Sivarajah — Quantinuum
- Roger Luo — QuEra
- Lukas Burgholzer — MQSC & TUM
- Aleksander Wennersteen — Pasqal
- Jean Senellart — Quandela
- Elie Gouzien — Alice & Bob
- Amir Shehata — ORNL
- Markus Müller — FZ Jülich
- Jerry Chow — IBM
- Austin Fowler

In addition, the forum will feature almost 50 software pitches, i.e., presentations of new software tools and features both on stage and in dedicated poster sessions.

The audience will be composed of fellow software developers, end-users, and stakeholders. The forum will take place in Munich with a vibrant quantum computing community, home of the Munich Quantum Valley, and several key players “in the neighborhood”. We are expecting plenty of opportunities for networking and reaching out to potential collaborators.

The Munich Quantum Software Forum would not be possible without the generous support of our sponsors. Many thanks for making this event happen!

PLATINUM

SILVER

GOLD

BRONZE

The Munich Quantum Software Forum 2026 is organized by MQSC, and supported by the Chair for Design Automation at the Technical University of Munich as well as the Munich Quantum Valley.
